I SEMESTER
MC101 – FUNDAMENTALS OF COMPUTERS AND C-PROGRAMMING

Lecture : 4 Periods/week
Tutorial : 1 Period/Week
Credits : 4

Internal Marks : 40
External Marks : 60
External Examination : 3 Hrs

UNIT-I

Introduction to Computers, History and Generations of Computers, Primary and Secondary memory, Input-output devices, ALU, Processor, Applications of computers, Introduction to DOS and Windows, Data representation. Types of languages, ASCII character set. Introduction to LAN, MAN, WAN, Internet and WWW.

UNIT-II

Algorithm / pseudo code, Flowcharts, Program development steps, Structure of C program, Identifiers, Basic data types and sizes, Constants, variables, arithmetic, relational and logical operators, increment and decrement operators, conditional operator, bit-wise operators, assignment operators, expressions, type conversions, conditional expressions, precedence and order of evaluation.
Control structures - If, If-Else, goto, labels, and switch statements, Loops- while, do-while and for statements, break, continue, Programming examples.

UNIT-III

Introduction to Arrays, 1-D arrays - declaration, definition, accessing elements, storing elements, Character arrays & Strings, string handling functions, Multidimensional arrays – example programs on arrays to expose various applications on different kinds of arrays.

UNIT-IV

Functions- basics, types of functions, types of parameters, parameter passing, storage classes- extern, auto, register, static, scope rules, Call by value, recursive functions, header files, C pre-processor, example programs. Pointers- concepts, declaration and initialization of pointer variables, pointers as function arguments, passing arrays to functions, dangling pointers, address arithmetic, pointers to pointers, pointers and multidimensional arrays, dynamic memory managements functions, command line arguments, C program examples.

UNIT-V

Derived Types-enum, typedef, structures- declaration, definition and initialization of structures, accessing structures, Nested structures, arrays of structures, structures and functions, pointers to structures, self referential structures, unions, bit-fields, Concept of a file, text files and binary files, Formatted I/o, file I/o operations, C program examples.

TEXT BOOKS

1. Introduction to computers by Peter Nortons, MGH 5th Edition.
REFERENCES:

1. The C Programming Language, B.W. Kernighan, Dennis M.Ritchie, PHI/ Pearson.

MYLAVARAM - 521 230, Krishna Di, A.P.
MC102 –DIGITAL LOGIC AND COMPUTER SYSTEM ORGANIZATION

Lecture : 4 Periods/week

Internal Marks : 40

External Marks : 60

Credits : 4

External Examination : 3 Hrs

UNIT - I

Introduction to Digital Computer.
1.1 Number system - Binary, Octal, HEXA and their inter-conversion, 1's and 2's complement.
1.2 Boolean Algebra and Logic Gates, De-Morgan’s Theorem, Duality Theorem,
1.3 K-Maps
1.4 Introduction, Binary Addition, Binary Subtraction, Addition/Subtraction of Numbers in 1’s Complement Notation, addition/Subtraction of Numbers in Two’s Complement Notation, Fixed and floating point representation of numbers.

UNIT - II

Combinational Circuits
2.1 Half Adder, Full Adder, Binary Adder and Subtractor
2.2 Decoder / Encoder.
2.3 Multiplexer / De-multiplexer
2.4 Sequential Circuits: Flip Flops - SR, D, JK, Master – Slave, Edge Triggered
2.5 Shift Registers.
2.6 Introduction to Counters: Synchronous as well as Asynchronous Counter

UNIT - III

Memory System
3.1 Memory Hierarchy
3.2 Primary Memory – DRAM, SDRAM, DDR, RDRAM. ROM, PROM, EPROM, EEPROM
3.3 Concepts of Auxiliary, Associative,
3.4 Cache And
3.5 Virtual Memory

UNIT- IV

CPU Organization
4.1 CPU Building Blocks
4.2 CPU Registers and BUS Characteristics. Interface Basics
(Only Block Diagram) + Local Bus features & Types should be covered.
4.3 Addressing Modes, Instruction and Execution Interrupt cycle
4.4 Pipelining, Arithmetic Pipelining +RISC Pipelining
4.5 Micro programmed control - control memory, address sequence, micro program example.
UNIT - V

Input Output Organization
5.1 IO interface
5.2 Modes of Transfer
5.3 Asynchronous Data Transfer
5.5 Interrupt
5.6 Direct Memory Access
5.7 Input Output Processor, Types (SISD, SIMD, MIMD, MISP)

MC103 –ACCOUNTING AND FINANCIAL MANAGEMENT

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 4
External Examination : 3 Hrs

UNIT- I

UNIT- II

UNIT- III

UNIT- IV

Budgetary control and standard costing: Meaning and features of budgetary control – preparation of various types of budgets fixed and flexible budgets (production, sales, cash and master budgets) zero based budgeting.

UNIT- V

Accounting principles and computerized accounting: Generally accepted accounting principles (GAAP) accounting concepts and conventions – Accounting standards issued by ICAI. Computerization of Accounts – Accounting packages – Tally & wings – Documents used for data collection, files management, master files transaction files – processing of different files and output obtained.

MC104 – DISCRETE STRUCTURES AND GRAPH THEORY

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 4
External Examination : 3 Hrs

UNIT - I

UNIT - II

Set theory and Relations: Introduction, Relations and ordering, properties of binary relations, Equivalence, Compatibility relations, Partial Ordering, Hasse Diagram.
Functions: Composition of functions, Inverse function, Recursive functions, Pigeonhole principle and its applications.

UNIT - III

Elementary Combinatorics:
Basics of Counting, Combinations and Permutations, Binomial Coefficients, Binomial and Multinomial theorems, Principle of inclusion and exclusion.
Generating Functions: Generating function of sequences, calculating coefficient of generating functions
Recurrence Relations: Solving recurrence relations by substitution, by characteristic roots, by generating functions. Solution of non homogeneous recurrence relations

UNIT - IV

Graph Theory-I:
Basic concepts, Representation of Graph, BFS, DFS, Isomorphism and sub graphs, Multi graphs, Planar graphs, Euler circuits, Hamiltonian graphs, Chromatic Numbers.

UNIT - V

Graph Theory-II: Single source and All pairs shortest path problems- Dijkstra’s and Floyd’s algorithms, Transitive closure- Warshall’s Algorithm, Spanning Trees, Kruskal’s algorithm, Prim’s algorithm.

UNIT - I

Probability Theory: Sample spaces Events & Probability; Discrete Probability; Union, intersection and compliments of events; Conditional probability; Baye’s theorem.

UNIT - II

UNIT - III

Estimation – point estimation, interval estimation, Bayesian estimation, Text of hypothesis, one-tail, two-tail test, test of Hypothesis concerning means. Test of Hypothesis concerning proportions, F-test, goodness of fit.

UNIT - IV

Linear correlation coefficient Linear regression; Non Linear regression Least square fit; polynomial and Curve fittings

MC106—ENGLISH LANGUAGE COMMUNICATION SKILLS

Lecture : 2 Periods/week  Internal Marks : 40
Lab : 2 Periods/week  External Marks : 60
Credits : 3  External Examination : 3 Hrs

This composite syllabus including Communication Skills Lab activities is designed for the students of MCA for various functional and situational purposes - professional or social. It aims at building effective language and communication competence, highly desirable social and behavioral traits required in academic and professional pursuits. This is sought to be achieved through an amalgamation of theoretical aspects and laboratory based skill oriented activities. Ultimately, employability quotient is sought to be improved in alignment with various soft skills.

UNIT – I

Communicative Grammar
Part A
Tense forms, Subject - Verb Agreement, Question Tags. Sounds of English (To Practice in the Lab)
Part B
One-Word Substitutes; Formation of Words, Using Words as Different Parts of Speech

UNIT - II

Communication – Process, Methods and Channels of Communication, Non Verbal Communication – Body Language

UNIT - III

Oral Presentations – Extempore & Prepared - Types of Presentation –JAM- Role Play-
Group Discussion

UNIT - IV

Features of Effective Writing - 7 Cs- Business Letters – Format - Style - Analysis of Sample Letters Collected from Industry – e-mail- Resume Writing

UNIT - V

Soft Skills—Significance and Components, Interpersonal Skills, Professional Etiquettes, Team Work, Empathy. This is a composite syllabus with equal emphasis on theory and conceptual clarity and practical exposure. Relevant cases have to be discussed in each unit and students must work in groups for Oral activities.

LIST OF EXPERIMENTS

I) Student is expected to observe various components of computer physically and assembling and disassembling of components.

II) Write a program in 'C' language to cover the following problems.

a) Roots of Quadratic Equation.
   b) Example program which shows the usage of various Operators available in C Language.
   c) Example program which shows the usage of various Data types available in C Language.
   d) Example programs to illustrate the order of evaluation.

III) Write example programs

   a) To check whether the given year is leap year (or) not
   b) Converting given two digit number into words using switch statement
   c) To illustrate the usage of goto statement.
   d) Finding smallest & biggest number from the given set of 4 numbers using 'if' statement.
   e) Calculate the student grade in the examination – assume suitable constraints.
   f) Prepare electricity bill for the consumed units – assume suitable constraints.

IV) Example programs

   a) Display first N natural numbers
   b) To find whether the given number is Armstrong (or) not
   c) To find reverse of the given number and to check whether it is palindrome (or) not.
   d) To find whether given number is strong number (or) not.
   e) To check whether given number is Prime (or) not
   f) To display prime numbers with in the given range.
   g) To display the following structure

   \[
   \begin{array}{ccccccc}
   & i) & & & & & \\
   & 1 & & 2 & & 3 & \\
   & 1 & & 2 & & 3 & \\
   & 1 & & 2 & & 3 & \\
   & 1 & & 2 & & 3 & \\
   \end{array}
   \]

   \[
   \begin{array}{ccccccc}
   & ii) & & & & & \\
   & 5 & & 4 & & 3 & \\
   & 4 & & 3 & & 2 & \\
   & 3 & & 2 & & 1 & \\
   & 2 & & 1 & & & \\
   \end{array}
   \]

I. Raja

HEAD

Master of Computer Applications
Lakireddy Bali Reddy College of Engg.
MYLAVARAM - 521 230, Krishna Dt, A.P.
V) a) Write a C program to find sum and average of given numbers using Arrays.
   b) To display elements of array in reverse order
   c) To search whether the given element is in the array (or) not using linear search & binary search.
   d) Write a C program to perform the following operations
      i) Addition, subtraction and multiplication of Matrices
      ii) Transpose of given matrix
   e) Write a C program to find whether the given string is palindrome (or) not.
   f) To accept line of text and find the number of characters, number of vowels and number of blank spaces in it.
   g) Write an example program to illustrate the use of any 5 string handling functions.

VI) a) To find factorial of a given number using functions.
   b) Swap two numbers using functions.
   c) To find GCD of two numbers using recursion
   d) Write a recursive function to solve Towers of Hanoi problem.
   e) Write an example program to illustrate use of external & static storage classes.

VII) a) Example program to bring clarity on pointer declaration & initialization.
   b) Write an example program to describe the usage of call by reference.
   c) Write a program to find sum of the elements of the array using functions.
   d) Write an example program using command line arguments.
   e) Program to illustrate the usage of dynamic memory management functions.

VIII) a) Write an example program using structures to process the student record. Assume suitable fields for student structures (Different kinds of initialization of structure variables are to be exercised)
   b) Write a program to read records of 10 employees and find their average salary( exercise array of structures & Nested structures concepts through this program)

MC152 – DIGITAL LOGIC AND COMPUTER SYSTEMS ORGANIZATION LAB

Lab/Practical: 4 Period/Week
Credits: 2

Internal Marks: 40
External Marks: 60
External Examination: 4 Hrs

EXERCISE 1
Using Logic Gates: AND, OR, NOT, NOR, XOR, NAND, XNOR, Buffer

EXERCISE 2
Boolean Algebra: Theorems and logical Gates, verification of truth tables for some given expressions

EXERCISE 3
Realization of Boolean expressions; Using (i) AND – OR-NOT Gates (ii) NAND Gates (iii) NOR Gates

EXERCISE 4
Latches Flip – Flops: RS, JK, T, D, Master – Slave FF, Edge – Triggered Flip – Flops

EXERCISE 5
Registers: All types of Shift Register s and Adder, Subtractor, Divider, Negator, Comparator

EXERCISE 6
Counters: Binary Counter, Synchronous Binary Counter, Synchronous Up/Down counter

EXERCISE 7
Asynchronous Binary Counter, Ripple Counter, Decade Counter, Up/Down Counter

EXERCISE 8
Modulo Counter: Modulo - 5, Modulo - 10

EXERCISE 9
Adders / Subtractors: Half Adder, Full Adder, 1’s and 2’s complement addition

EXERCISE 10
Multiplexers/ Data Selector: 2- input and 8- input, Demultiplexers, Logic Function Generator

EXERCISE 11
Decoders and Encoders

EXERCISE 12
BCD adders and Comparators

EXERCISE 13

EXERCISE 14
RAM, ROM, PROM, EPROM – Testing Memory Chips

II SEMESTER
MC201 - DATA STRUCTURES

Lecture : 4 Periods/week
Internal Marks : 40

External Marks : 60

Credits : 4
External Examination : 3 Hrs

UNIT - I

Introduction to the Datastructures, Linear and nonlinear, Static and dynamic data structures, Introduction to complexity analysis & asymptotic notations.
Searching & sorting techniques: Linear and Binary search methods, Bubble sort, Selection sort, Insertion sort, Quick sort, Merge sort.

UNIT - II

Dynamic Memory allocation, Linked List- Single and Double Linked List – Implementation of various operations

UNIT - III

Stack and Queues: Definition, representation, Applications, Infix to postfix conversion using stacks, Evaluation of Postfix expressions using stacks, Operations on Stacks and Queues, Circular Queues, DEQuues and Priority Queues.

UNIT - IV

Trees- Terminology, Binary trees representation and Tree traversals, Expression trees, BST and operations on BST, Heap and Heap sort, Threaded binary trees.

UNIT - V

Graphs – Terminology, Graph representation, Graph traversals-DFS, BFS, Dijkstra’s, Warshall’s and Floyd’s algorithms, Minimum Cost spanning trees-Prim’s and Kruskal’s algorithms

MC202 – DATABASE MANAGEMENT SYSTEMS

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 4
External Examination : 3 Hrs

UNIT - I

Database system Applications, Database system Vs File system, View of data, Data abstraction, Instances and Schemas, Database users, Database system structure, Database design and ER diagrams, Beyond - ER Design Entities, Attributes, Entity sets, Relationships and Relationship sets, Additional features of ER model.

UNIT - II

Introduction to Relational model- Integrity constraints over the relations, Enforcing integrity constraints, Database Languages, DDL, DML, TCL, basic form of SQL query, Querying relational data, Logical database design, views, Destroying and altering tables/views. Nested queries correlated nested queries, Null values, Relation Algebra- selection, projection, renaming, join, examples.

UNIT - III

UNIT - IV

UNIT - V

File organizations, Comparison of File Organizations
Index data Structures – Tree based Indexing, Hash based Indexing , Indexes and Performance Tuning,
Tree based Indexing: Indexed Sequential Access Methods (ISAM), B+ Trees: Dynamic Index Structure.
Hash Based Indexing: Static Hashing – Extendable hashing – Linear Hashing.

MC204 - ORGANIZATION STRUCTURE AND PERSONNEL MANAGEMENT

Lecture: 4 Periods/week
Internal Marks: 40
External Marks: 60
Credits: 4
External Examination: 3 Hrs

UNIT - I

UNIT - II

Classical Theories of Organization & Behavior Theories of Organization:
Functional approach-division of labor, levels of authority, span of control, authority & responsibility, Efficiency of management.
Concept of organization structure-formal and informal organization, difficulties due to informal organization-group behavior-Committee-motivation and theories of motivation.

UNIT - III

Human Resource Management: Objectives, functions of HRM, duties and responsibilities of HR department in the organization-changing, concepts of personal management

UNIT - IV

HR Planning, Training and Development: Preparation of man power inventory and forecasting, job description, recruitment, job specification and selection, Interviewing techniques, transfers, promotion and its policies.
Objectives of training-identifying training needs-training methods-on the job training-off the job training-job evolution-training functions India-state of-Art-survey.

UNIT - V

Communication, Strategic Management: Importance of communication, communication process-methods of -two way communication, barriers of communication, Organizational barriers-essentials of effective Communication system.
Introduction-study of Strategic Management-environmental scanning-internal environment and external environment SWOT analysis-challenges in LPG.

MC205 – SOFTWARE ENGINEERING

Lecture : 4 Periods/week  
Internal Marks : 40  
External Marks : 60  
Credits : 4  
External Examination : 3 Hrs

UNIT - I

A Generic view of process: Software engineering- A layered technology, a process framework, The Capability Maturity Model Integration (CMMI)
Process models: The waterfall model, Incremental process models, Evolutionary process models, The Unified process.
Software Requirements: Functional and non-functional requirements, User requirements, System requirements, Interface specification, the software requirements document.

UNIT - II

Requirements engineering process: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements management.
Design Engineering: Design process and Design quality, Design concepts, the design model.
Creating an architectural design: software architecture, Data design, Architectural styles and patterns, Architectural Design.

UNIT - III

Object-Oriented Design: Objects and object classes, An Object-Oriented design process, Design evolution.
Performing User interface design: Golden rules, User interface analysis and design, Interface analysis, interface design steps, Design evaluation.

UNIT - IV

Testing Strategies: A strategic approach to software testing, test strategies for conventional software, Black-Box and White-Box testing, Validation testing, System testing, the art of Debugging.
Product metrics: Software Quality, Metrics for Analysis Model, Metrics for Design Model, Metrics for source code, Metrics for testing, Metrics for maintenance.

UNIT - V

Risk management: Reactive vs Proactive Risk strategies, software risks, Risk identification, Risk projection, Risk refinement, RMMM, RMMM Plan.

MC251 – DATA STRUCTURES LAB

Internal Marks : 40
External Marks : 60
Credits : 2
External Examination : 4 Hrs

LIST OF EXPERIMENTS

Implement the following programs using C language.

1. Implement Linear and Binary Search mechanisms.

2. Sort the given list of numbers using a) Selection Sort  b) Bubble Sort  c) Insertion Sort  d) Merge sort e) Quick sort

3. Create a single linked list and implement the following operations:
   a) Insert a node at specific position
   b) Delete a node from a specific position
   c) Counting the nodes
   d) Reversing the linked list

4. Create a Double linked list and implement the following operations:
   a) Insert a node at specific position
   b) Delete a node from a specific position
   c) Counting the nodes
   d) Reversing the linked list

5. Implement PUSH and POP operations on Stacks using Arrays. Handle the OVERFLOW and UNDERFLOW problems also.

6. Implement PUSH and POP operations on Stacks using Linked List. Handle the OVERFLOW and UNDERFLOW problems also.

7. Implement Insertion and Deletion operations on Queues using Arrays. Handle the OVERFLOW and UNDERFLOW problems also.

8. Implement Insertion and Deletion operations on Queues Linked List. Handle the OVERFLOW and UNDERFLOW problems also.

9. Implement Insertion and Deletion operations on Queues using Arrays and Linked List. Handle the OVERFLOW and UNDERFLOW problems also.

10. Write program to create a BST and traverse it in Inorder, Preorder and Post order.

11. Write a program to count the number of leaf nodes in a Binary tree.

12. Write a program to find the Path Matrix of a graph using Warshall’s algorithm.

13. Implement BFS and DFS traversal techniques on a given graph.

14. Write a program to find the All Pairs Shortest Path matrix using Floyd’s

DATABASE MANAGEMENT SYSTEMS LAB (Using Oracle, SQL & PLSQL)

1. Creating tables for various relations (in SQL)
2. Construct a bank database with ER diagrams and tables with all IC’s
3. Create sailors, reserves and boats tables and implement all algebraic operations.
4. Create a database for university with all IC’s
5. Aggregate functions
6. String functions
7. Nested queries
8. Views
9. Writing Triggers on bank database
10. Writing triggers on university database
11. Writing functions
12. Writing procedures

III SEMESTER
MC301 - OOPS THROUGH JAVA

Lecture : 4 Periods/week  
Internal Marks : 40  
External Marks : 60  
Credits : 4  
External Examination : 3 Hrs

UNIT - I

Features of OOPS:
Introduction to Java, History of Java, Features of Java, The Java Virtual Machine, Garbage collection, Java is important for Internet, Programming concepts of basic Java, Identifiers and Keywords, Data types in Java, Java coding conventions, Expressions in Java, Control structures, Decision making statements, Arrays.

UNIT - II

Objects and Classes, Object fundamentals, Pass by value, Pass by reference, Overloading, Overriding, Constructors, Finalization, Subclasses (Inheritance), this, super, final with inheritance, Dynamic method dispatch, Scope rules, Static data, Static methods, Static blocks, All modifiers of class, String Handling, Command line arguments, Abstract Classes, Interfaces, Inner classes, Packages, Package access, Importing packages and classes, User define packages, Class-path.

UNIT - III

Exception Handling, Types of Exceptions, try, catch, finally, throw keywords, Creating your own Exceptions.  
Multithreading - Differences between multiple processes and multiple threads, Thread states, Creating threads, Interrupting threads, Thread priorities, Synchronizing threads, Inter thread communication, Thread groups, Daemon threads.

UNIT - IV

Applets  
Types of Applets, Applet life cycle, Graphics, getDocumentBase() & getCodeBase ()

UNIT - V

Java.util  
Java utility packages, Classes & Interfaces, HashTable, Vector, ArrayList, StringTokenizer, Date.  
SWINGS  
Introduction to Swings: Japplet, Handling Swing Controls like Icons, Buttons, TextBoxes, CombBoxes, TabbedPanels, ScrollPanels, JTree, JTable, Differences between AWT Controls & Swing Controls, developing home page using Applets & Swings.  
JAVA I/O  
Files and Streams, Stream classes, Reader-Writer classes, File class tests and Utilities, Serialization and Deserialization.

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 4
External Examination : 3 Hrs

UNIT - I

Introduction:
Physical Layer:
Guided Transmission Media

UNIT - II

Data Link Layer:
Design issues of Data Link Layer, Error Correction and Detection, Elementary Data Link Protocols: Unrestricted Simplex Protocol, Stop and Wait, Simplex Protocol for noisy channel, Sliding Window Protocol, Go back N, Selective Repeat, HDLC,

UNIT-III

Network Layer:

UNIT-IV

Transport Layer

UNIT-V

Application Layer
DNS: Domain Name System, Electronic Mail (SMTP) :Architecture, User Agent , Message Format, Message Transfer, Delivery, FTP, The World Wide Web (HTTP) , Introduction to Storage Area Networks(SAN), Peer-to-Peer Networks

UNIT-I

Basics of Software Testing:

UNIT -II

Testing Techniques:

UNIT -III

Test Planning:
Test policy, Test strategy, Test plan, Quality plan and Test plan, Quality plan template, Test plan template, Guidelines for developing the Test plan, Test Standards, Building Test data and Test cases, Test scenario, Test cases, Template for Test cases, Test scripts, Test Log Document, Effective Test cases, Test file, Building Test data, Generation of Test data, Roles and Responsibilities in Testing life cycle, Test progress monitoring.

UNIT-IV

Test Metrics and Test Reports:

UNIT -V

Test process Improvement:
The need for Test process Improvement, Test process Maturity, Test process Improvement Model, Test process Improvement Model stages, Graphical representation of Improvements.

Testing Tools:

UNIT-I

Unix Utilities-Introduction to Unix file system, Features of Unix OS, vi editor, File handling utilities, Security by file permissions, Process utilities, Disk utilities, Networking commands, cp, mv, ln, rm, unlink, mkdir, rmdir, du, df, mount, umount, find, umask, ulimit, ps, who, w, finger, arp, ftp, telnet, rlogin, text processing utilities and backup utilities, detailed commands to be covered are cat, tail, head, sort, nl, uniq, grep, egrep, fgrep, cut, paste, join, tee, comm, cmp, diff, tr, tar, cpio.

UNIT-II

Problem solving approaches in Unix: Using single commands, Using compound commands, Shell scripts, C programs, Building own command library of programs. Working with the Bourne shell: what is a shell, Shell responsibilities, Pipes and input redirection, Output redirection, here documents, Shell as a programming language, Shell meta characters, Shell variables, Shell commands, Environment, Control structures, Shell script examples.

UNIT-III

Unix Files: Unix file structure, Directories, Files and devices, System calls, Library functions, Low level file access, Usage of open, creat, read, write, close, lseek, stat, fstat, umask, dup, dup2, Standard I/O (fopen, fclose, fflush, fseek, fgets, getc, getchar, fputc, putc, putchar, fgets, gets), formatted I/O, Streams and file descriptors, File and directory maintenance (chmod, chown, unlink, link, symlink, mkdir, rmdir, chdir, getcwd), Directory handling system calls (opendir, readdir, closedir, rewinddir, seekdir, telldir)

UNIT-IV

Semaphores-Unix system-V Semaphores, Unix kernel support for Semaphores, Unix APIs for Semaphores.

UNIT-V

Message Queues-Unix system-V Messages Queues, Unix kernel support for Message Queues, Unix APIs for Message Queues, Client/Server example.
Shared Memory-Unix system-V Shared memory, Unix kernel support for shared memory, Unix APIs for shared memory, Semaphore and Shared memory example.
Sockets: Berkeley Sockets, Socket system calls for connection oriented protocol and connectionless protocol, Client/Server example.

UNIT-I

Development: Characteristics and Phases scientific method, Types of models, General methods for solving OR problems, Operations Research models, Significance of operations research.

Linear Programming: Introduction to Linear Programming, Two phase Simplex method, Big-M method, Duality, Interpretation, Applications.

UNIT-II

Sequencing Model: Classification of self-problems, processing of n jobs through two machines, three machines, processing of two jobs through m machines.

UNIT-III

UNIT-IV

Waiting Lines: Introduction, Single channel, Poisson arrivals, Exponential service times, Unrestricted queue, with infinite population models, Single channel, Exponential Service times with infinite population and restricted queue, Multi-channel, Exponential service times with infinite population and unrestricted queue.

UNIT-V

Dynamic Programming: Introduction, Billman’s principal of optimality, Solution of problems with finite number of stages.

MC306 –ENGLISH LANGUAGE COMMUNICATION SKILLS - II

Lecture : 2 Periods/week  Internal Marks : 40
Lab. : 2 Periods/week  External Marks : 60
Credits : 3  External Examination : 3 Hrs

This composite syllabus including Communication Skills Lab activities is designed for the students of MCA for various functional and situational purposes - professional or social. It aims at building effective language and communication competence, highly desirable social and behavioral traits required in academic and professional pursuits. This is sought to be achieved through an amalgamation of theoretical aspects and Laboratory -based skill oriented activities. Ultimately, Employability quotient is sought to be improved in alignment with various soft skills

UNIT - I

Communicative Grammar
Part A
Sounds of English- accent & stress, Spotting the errors, voice change, Direct & Indirect speech
Part B
Idioms and phrases; Words often confused

UNIT - II

Communication - Listening-process & requisites of good listening – Reading skills- process & requisites – Barriers to Effective Communication -Body Language

UNIT - III

Oral Presentations – Technical - Seminar preparation - Interview Skills – types - Mock Interviews

UNIT - IV

UNIT - V

Soft skills - Leadership development strategies - Team work- concept and exercises - Cross cultural communication - Networking skills

This is a composite syllabus which seeks to place equal emphasis on theory and developing conceptual clarity and practical exposure. Relevant cases have to be discussed in each unit and students must work in groups for oral activities.

1) Write a Java program to find the roots of a quadratic equation?

2) Write a Java program to generate first n Fibonacci numbers?

3) a) Write a Java program to reverse the given number?

   b) Write a Java program to check whether given number is Prime or not?

4) Write a Java program to check whether given number is Palindrome or not?

5) Write a Java program to check whether given number is Armstrong or not?

6) Write a Java program to find factorial of the given number using recursions?

7) Write a Java program to find min and max number of given array?

8) Write a Java program to search an element by using linear search and binary search?

9) Write a Java program to sort the elements of an Array?

10) Write a Java program to perform Matrix Multiplication?

11) Write a Java program using constructors?

12) Write a Java program using inheritance?

13) Write a Java program to implement Method over Loading and Method over riding?

14) Write a Java program by using this and super key word.

15) Write a Java program by using final variables and final methods.

16) Write a Java program to implement dynamic method dispatch.

17) Write a Java program using abstract class?

18) Write a Java program to implement Multiple Inheritance (Interface)?

19) Write a Java program on demonstration of packages?

20) a) Write a Java program to check whether given string is palindrome (or) not. ?

   b) Write a Java program to sort the set of strings in sorting order?

   c) Write a Java program to find sum of the numbers using String Tokenizer?

21) Write a Java program by using length () and capacity () Methods of StringBuffer?

22) Write a Java program to find the sum of the numbers by using command line arguments?

23) (a) Write a Java program by using Exception handling Mechanism including Finally block?

   b) Write a Java program to Handle User Defined Exceptions?

24) (a) Write a Java program to create Multithreads?

   (b) Write a Java program on Thread Synchronization

25) Write a Java program to implement Inter thread communication?

26) (a) Write a sample Applet program to Display Message?

   (b) Write an Applet program using Graphics?

   (c) Write an Applet program to pass parameters to Applet.

27) (a) Write a Java program to create user login by using AWT components?

   (b) Write a Java program to implement arithmetic calculator using Swing Components?

28) (a) Write an applet program to handle Mouse Events?

   (b) Write an applet program to handle Key Events using adapter Class?

MC 352 –UNIX NETWORK PROGRAMMING LAB.

Lab. : 4 Periods/week  Internal Marks : 40
         Credits : 2
         External Marks : 60
         External Examination : 3 Hrs

1. Write a Shell script to generate a multiplication table.

2. Write a Shell script that copies multiple files to a directory.

3. Write a Shell script that counts the number of lines and words present in a given file.

4. Write a Shell script that displays the list of all files in the given directory.

5. Write a Shell script (small calculator) that adds, subtracts, multiplies and divides the given two integers. There are two division options: one returns the quotient and the other returns remainder. The script requires 3 arguments: The operation to be used and two integer numbers. The options are add (-a), subtract (-s), multiply (-m), quotient (-c) and reminder (-r).

6. Write a Shell script to reverse the rows and columns of a matrix.

7. Write a C program that counts the number of blanks in a text file.
   (a) Using standard I/O
   (b) Using system calls.

8. Implement in C the following Unix commands using system calls.
   a) cat  b) ls  c) mv

9. Write a program that takes one or more file/directory names as command line input and reports the following information on the file:
   a) File type  b) Number of links  c) Time of last access,
   d) Read, Write and Execute permissions.

10. Write a C program that illustrates uses of the mkdir, opendir, readdir,
    closedir, and mkdir APIs.

I. Rajendra Kumar
    HEAD
    Master of Computer Applications
    Lakireddy Bali Reddy College of Engg.
    MYLAVARAM - 521 230, Krishna Dt, A.P.
11. Write a C program that illustrates how to execute two commands concurrently with a command pipe.

12. Write a C program that illustrates the following:
   a) Two-way communication with unidirectional pipes.
   b) Two-way communication with bidirectional pipes

13. Write a C program that illustrates the creation of child process using fork system call.

14. Write a C program that displays the real time of a day every 60 seconds.

15. Write a C program that illustrates file-locking using Semaphores.

16. Write a C program that implements a Producer-Consumer system with two processes. (Using semaphores)

17. Write a C program that illustrates InterProcessCommunication(IPC) using shared memory system calls.

18. Write a C program that illustrates the following.
    a) Creating a Message Queue.
    b) Writing to a Message Queue.
    c) Reading from a Message Queue.

19. Write a C program to develop simple Client/Server application using Sockets(system calls).

MC402 –ADVANCED JAVA

Lecture : 4 Periods/week  Internal Marks : 40
External Marks : 60
Credits : 4  External Examination : 3 Hrs

UNIT-I

HTML: Introduction, Common tags ,HTML Tables and formatting internal linking, Complex HTML forms. Introduction to Scripting Languages: Java Script, Control structures

UNIT-II

Java script functions, Arrays & Objects, DHTML, CSS, Event model
Parsers: DOM and SAX.

UNIT-III

JDBC: Database Programming using JDBC, Studying Javax.sql.* package
Types of JDBC Drivers, Writing JDBC applications using select, insert, delete, update, Types of Statement objects (Statement, Prepared Statement and Callable Statement); ResultSet, ResultSetMetaData, Inserting and updating records,
BDK: Introduction to Java Beans, Advantages of Java Beans, BDK, Introspection, Using Bound properties, Bean Info Interface, Constrained properties, Persistence, Customizers, Java Beans API

UNIT-IV

Servlets: Introduction of Servlet, HTTP Servlet Basics, Types of Servlets and Life cycle, Servlet API Overview; Writing and running Simple Servlet.ServletConfig&ServletContext,
Writing Servlet to handle Get and Post Methods, Reading user request data,Writing thread safe Servlets,Concept of cookies, Reading and writing cookies, Need of Session Management, Types of Session management,UsingHttpSession Object ,Servlet chaining , Servlet & JDBC,
How to configure TOMCAT, Directory structure for a web Application

UNIT-V

JSP:
The Problem with Servlets, The anatomy of a JSP Page, JSP Processing, JSP Application Design with MVC,
Introduction to JSP and JSP Basics, Implicit Objects, JSP Tags, Life cycle of JSP, JSP and Java Beans, JSP: sessions and cookies, Error Handling with JSP, JDBC with JSP

UNIT I

INTRODUCTION:

Symmetric Cipher:

UNIT II

PUBLIC-KEY CRYPTOGRAPHY
Number Theory, Principles of public-key Cryptosystems, RSA, Key Management, Diffie-Hellman Key Exchange, Elliptic Curve Arithmetic and cryptography.

UNIT III

AUTHENTICATION AND HASH FUNCTIONS

UNIT IV

NETWORK SECURITY

UNIT V

SYSTEM SECURITY

TEXT BOOK

MC404 –OBJECT ORIENTED ANALYSIS & DESIGN USING UML

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 4
External Examination : 3 Hrs

UNIT-I

UNIT-II

Basic Structural Modeling: Classes, Relationships, Diagrams.
Advanced structural Modeling: Advanced Classes, Advanced relations, Interfaces, Types and Roles

UNIT-III

Class & Object diagrams: Terms, Concepts, Common Modeling techniques for Class & Object diagrams.

UNIT-IV

Advanced Behavioral Modeling: Events and Signals, State machines, State chart diagrams.

UNIT-V

Design Patterns:- Introduction, Benefits of patterns, Creational patterns, Structured Patterns, Behavioral patterns, Expectations from Design Patterns, Pattern Community.

MC4051 –ADVANCED DATABASES

Lecture : 4 Periods/week  
Internal Marks : 40  
External Marks : 60  
Credits : 3  
External Examination : 3 Hrs

UNIT - I

Object Oriented Databases: Concepts for Object databases, Object database Standards, Languages and Design.

UNIT - II

Active Database concepts and Triggers, Temporal database concepts, Multimedia Databases, Deductive databases.

UNIT - III

Distributed databases:  
Distributed Database Concepts, Data fragmentation, Replication and Allocation techniques for Distributed database Design, Types of Distributed Database Systems, Query processing in Distributed Databases, Concurrency control and Recovery in Distributed Databases, 3-tier Client-Server architecture, Distributed Databases in Oracle.

UNIT - IV

Query processing & Optimization:  

UNIT - V

Advanced transaction processing:  
Transaction processing monitors, Transactional work flow, Real time transaction system, Long duration transactions, Transaction management in multimedia databases

MC4052 – DISTRIBUTED OPERATING SYSTEMS

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 3
External Examination : 3 Hrs

UNIT - I

Introduction
Definition of a DOS, Goals, H/w and S/w Concepts, Client-Server Model
Processes Threads: Introduction to Threads, Threads in Distributed Systems, Clients: User Interfaces, Client-Side Software for Distribution Transparency; Servers: General Design Issues, Object Servers; Code Migration: Approaches to Code Migration, Migration and Local Resources, Migration in Heterogeneous Systems; Software Agents: Software Agents in Distributed Systems, Agent Technology.

UNIT - II

Naming Systems:
Naming Entities: Names, Identifiers, and Addresses, Name Resolution, The Implementation of a Name Space, Example: DNS, X.500Locating Mobile Entities: Naming versus Locating Entities, Simple Solutions, Home-Based Approaches, Hierarchical Approaches Clock synchronization, logical clocks, global state, election algorithms, mutual exclusion.

UNIT - III

Consistency and Replication:
Introduction, Data-Centric Consistency Models, Client-Centric Consistency Models, Distribution Protocols, Consistency Protocols.
Fault Tolerance:
Introduction to Fault Tolerance, Process Resilience, Reliable Client-Server Communication, Reliable Group Communication, Distributed Commit.

UNIT - IV

Distributed File System

UNIT - V

Distributed Object Based System
CORBA, Distributed Com, Globe and Comparison of CORBA, DCOM.
Distributed Document-Based System and Coordinate Based System
The World Wide Web, Lotus Notes, Comparison of WWW and Lotus Notes.

TEXT BOOK

Distributed Systems, Principles and paradigms, 2/e Tanenbaum,MaartenVansteen, Pearson education.

MC4053 –SOFTWARE DESIGN METHODOLOGIES

Lecture : 4 Periods/week
Credits : 3

Internal Marks : 40
External Marks : 60
External Examination : 3 Hrs

UNIT - I

Basic concepts of Design:
Introduction, Characteristics of Design activities, Essential elements of Designs.

Design Quality:
Software Quality models: Hierarchical models, Relational models,
The effect of Design on software quality, Efficiency, Correctness and Reliability, Portability,
Maintainability, Reusability, Interoperability, Quality attributes of software Design, Witt, Baker
and Merritt’s Design objectives, Parnas and Weiss’s requirements of good Designs, Quality
of development process

Design Principles:
Basic rules of software Design: Causes of difficulties, Vehicles to overcome difficulties, Basic
rules of software Design
Design processes: The context of Design in Software development process, Generic Design
process, Descriptive models, Structure of software Design methods

UNIT - II

Software Architecture:
The notion of Architecture: Architecture in the discipline of buildings, Architecture in the
discipline of computer hardware, General notion of architecture. The notion of software
architecture, Prescriptive models, Descriptive models, Multiple view models, Roles of
architecture in software Design. Software architectural style, Introductory examples, the
notion of software architectural style.

Description of Software Architectures:
The Visual Notation: Active and Passive elements, Data and control Relationships,
Decomposition/Composition of Architectural elements

UNIT - III

Typical Architectural Styles:
Data flow: General data flow styles, The pipe- and filter sub-style, The batch sequential
processing , sub-style Independent components: the general independent components style,
the event-based implicit invocation systems sub-style.
Call and return:
The general call and return style, the layered systems sub-style, Data Abstraction: the
abstract data type and object-oriented sub-style
Data-centered style, Virtual machine Architecture

Using Styles in Design:
Choices of styles, Combinations of styles: Hierarchical heterogeneous styles,
Simultaneously heterogeneous styles, Locationally heterogeneous styles
UNIT - IV

Architectural Design space:
Theory of Design spaces: Structure of Design spaces, Solving Design synthesis and analysis problems; Design space of architectural elements: Behavior features, Static features, Design space of architectural styles, Characteristic features of architectural styles, Classification of styles

Scenario-Based Analysis and Evaluation:
The concept of scenario, Scenarios for evaluating modifiability, Scenarios for evaluating Performance, Scenarios for evaluating reusability.

UNIT - V

Analysis and Evaluation of Modifiability: SAAM Method:
The input and output, the process (Activities in SAAM Analysis)

Quality Trade-Off Analysis: ATAM Method
ATAM analysis process, ATAM analysis activities

Model-Based Analysis: HASARD Method
Representation of quality models, construction of quality models.

TEXT BOOK

Software Design Methodology: From Principles to Architectural Styles , Hong zhu, Elsevier, 2009

REFERENCES

MC4054 – COMPUTER GRAPHICS AND VISION

Lecture : 4 Periods/week
Credits : 3

Internal Marks : 40
External Marks : 60
External Examination : 3 Hrs

UNIT - I

Introduction: Application areas of Computer Graphics, Overview of graphics systems, Video-display devices, Raster-scan systems, Random scan systems. Output primitives: Points and lines, Line drawing algorithms, Mid-point circle and ellipse algorithms. Filled area primitives: Scan line Polygon Fill algorithm, Boundary-fill and Flood-fill algorithms.

UNIT - II

2D & 3D Geometrical Transformations: Translation, Scaling, Rotation, Reflection and Shear transformations, Matrix representations and homogeneous coordinates, Composite transformations, Transformations between coordinate systems, Cohen-Sutherland line clipping algorithm, Sutherland-Hodgeman polygon clipping algorithm.

UNIT - III

Introduction to Digital Image Processing: Examples of fields that use Digital image processing, Fundamental steps in Digital image processing, Components of image processing system. Digital Image Fundamentals: A simple image formation model, Image sampling and quantization, Basic relationships between pixels, Color models.

UNIT - IV

Image enhancement in the spatial domain: Basic gray-level transformation, Histogram processing, Enhancement using arithmetic and logic operators, Basic spatial filtering, Smoothing and sharpening spatial filters, Combining the spatial enhancement methods.

UNIT - V

Morphological Image Processing: Preliminaries, Dilation, Erosion, Open and Closing, Hit or miss transformation, Basic morphologic algorithms. Image Segmentation: Detection of discontinuous, Edge linking and boundary detection, Thresholding, Region-based segmentation.

MC451 – ADVANCED JAVA LAB.

Lab. : 4 Periods/week  Internal Marks : 40

External Marks : 60

Credits : 2  External Examination : 3 Hrs

1. Write a HTML program to create a Table.
2. Write a HTML program to create Lists.
3. Write a HTML program using Frames.
4. Write a HTML program to develop a web page to fill student information.
5. Write a HTML program that use CSS.
6. Write a HTML program to reverse a given number.
7. Write a Java script program to find that a given number is prime or not.
8. Write a Java script program to find that a given number is Armstrong or not.
9. Write a Java script program to find the factorial of a number using recursion.
10. Write a Java script program by using Java script Objects.
11. Write a HTML program that handles the events.
12. Write an XML program using DTDs.
13. Develop a web page to implement online book stores using XML.
14. Write a Java program to retrieve data from data base using Type-1 and Type-4 drivers.
15. Write Java program by using Prepared Statements and Callable Statements.
16. Write a Java program using forward only and bi-directional Resultsets.
17. Write an example program using BDK.
18. Write a simple Servlet program using Generic and HTTP Servlets.
19. Write a Servlet program that handles the user request by using doGet () and doPost () methods.
20. Write a Servlet program using Config and Context parameters.
21. Write a Servlet program to implement Session Tracking.
22. Write a Servlet program that uses JDBC.
23. Write a simple JSP program to display Date.
24. A) Write a JSP program by using Implicit objects.
   B) Write a JSP program to handle Exceptions.
25. Write a JSP program using JDBC.
26. Write a JSP program using Include, Forward requests.
27. Write a JSP program using useBean.

V SEMESTER
MC501 –BUSINESS INTELLIGENCE

Lecture : 4 Periods/week  Internal Marks : 40

External Marks : 60

Credits : 4  External Examination : 3 Hrs

UNIT-I

Introduction
Fundamentals of Data Mining, Data Mining functionalities, Classification of Data Mining Systems, Data mining applications, Data Warehouse and OLAP Technology, Multidimensional data Model, Data warehouse architecture.

UNIT-II

Data preprocessing: Data cleaning, Data Integration and Tranformation, Data Reduction, Discretization and concept Hierarchy generation, Data Mining primitives, Data Generalization and Summerization, Basic Characterization, attribute relevant analysis, Mining descriptive statistical measures, Data Mining query Languages.

UNIT-III

Association Rule Mining & Market Basket Analysis, Efficient and scalable Frequent Item Set Mining methods,(Apriory and FP growth), Mining various kinds of Association rules

UNIT-IV

Classification and Prediction, Classification by Decision tree induction, Bayesian classification, Prediction: Linear regression, Non-Linear regression.

UNIT-V

Cluster analysis: Types of Data in Cluster analysis, Categorization of clustering methods, Partitioning methods, Outlier analysis, Text Mining, Web Mining.

TEXT BOOK

Data Mining ,Concepts and Techniques ,Jiawei Han, MichelineKamber,Harcourt India

REFERENCES

Mylavaram - 521230., Krishna Dt, A.P.
MC502 – ARTIFICIAL INTELLIGENCE

Lecture : 4 Periods/week  Internal Marks : 40
External Marks : 60
Credits : 4  External Examination : 3 Hrs

UNIT-I

Introduction:
The AI Problems, The underlying Assumption
Problems, Problem Spaces, and Search:
Defining the problem as a State Space Search, Production Systems, Problem
Characteristics, Production System Characteristics, Issues in the Design of Search
Programs.
Heuristic Search Techniques:
Generate- and-Test, Hill Climbing, Best-First Search, Problem Reduction, Constraint
Satisfaction, Means-ends Analysis.

UNIT-II

Knowledge Representation Issues:
Representations and Mappings, Approaches to Knowledge Representation, Issues in
Knowledge Representation.
Using Predicate Logic:
Representing Simple Facts in Logic, Representing Instance and ISA Relationships,
Computable Functions and Predicates, Resolution.
Representing Knowledge Using Rules:
Procedural versus Declarative Knowledge, Logic Programming, Forward Versus Backward
Reasoning, Matching.

UNIT-III

Symbolic reasoning Under Uncertainty:
Introduction to Nonmonotonic Reasoning, Logics for Nonmonotonic Reasoning,
Implementation Issues, Augmenting a problem-solver,
Depth-First search, Breadth-First search.
Statistical Reasoning:
Probability and Baye’s Theorem, Certainly Factors and Rule-based Systems, Bayesian
Networks.
Strong Slot-and Filler Structures: Conceptual Dependency, Scripts.

UNIT-IV

Game Playing:
The Minimax search Procedure, Adding Alpha-beta Cutoffs.
Planning:
An Example Domain: The Blocks World, Components of a Planning System,
Goal, Stack Planning.
Natural language Processing, Learning.

I. Rajendra Kumar
HEAD
Master of Computer Applications
Lakireddy Bali Reddy College of Engg.
MYLAVARAM - 521230, Krishna Dt, A.P.
UNIT-V

Expert Systems, Perception and Action
Introduction to Neural Networks:
- Biological Neuron structure
- Basic Artificial Neuron Models
- Types of Neural Networks, Applications of Neural Networks

TEXT BOOK

REFERENCES

HEAD

Master of Computer Applications

MC503 -MULTIMEDIA APPLICATION DEVELOPMENT

Lecture : 4 Periods/week  Internal Marks : 40
External Marks : 60
Credits : 4  External Examination : 3 Hrs

UNIT - I

UNIT - II

ActionScript I: ActionScript Features, Object-Oriented ActionScript, Datatypes and Type Checking, Classes, Authorizing an ActionScript Class
Action Script II: Inheritance, Authorizing an ActionScript 2.0 Subclass, Interfaces, Packages, Exceptions.

UNIT - III

UNIT - IV

Lossy Compression Algorithm, Quantization, Transform Coding, Wavelet-Based Coding.

Basic Video Compression Techniques: Introduction to video compression, Video compression based on motion compensation, Search for motion vectors, MPEG, Basic Audio Compression Techniques.

UNIT - V

Multimedia Networks: Basics of Multimedia Networks, Multimedia Network Communications and Applications, Quality of Multimedia Data Transmission, Multimedia over IP, Multimedia over ATM Networks, Transport of MPEG-4, Media-on-Demand(MOD).

TEXT BOOK

Fundamentals of Multimedia by Ze-Nian Li and Mark S. Drew, PHI/Pearson Education

MC5041 – DATABASE TUNING

Lecture: 4 Periods/week
Internal Marks: 40
External Marks: 60
Credits: 3
External Examination: 3 Hrs

UNIT-I

UNIT-II

Index Tuning, Types of Queries, Key Types, Data Structures, Sparse Versus Dense Indexes, To Cluster or Not to Cluster, Joins, Foreign key Constraints, and Indexes, Avoid Indexes on small Tables.

UNIT-III

Tuning Relational Systems, Table Schema and Normalization, Clustering Two tables, Aggregate Maintenance, Record Layout, Query Tuning, Triggers. Communicating with the outside Client-server Mechanisms, Objects, application Tools, and Performance, Tuning the application Interface, Bulk Loading Data, Accessing Multiple Databases.

UNIT-IV

Troubleshooting: Introduction, How to gather Information: The Tools, Queries from Hell, Are DBMS Subsystems Working Satisfactory, Is the DBMS Getting All It Needs.

UNIT-V

Understanding access Plans: Data Access Operators, Query Structure Operators, Auxiliary Operators.
Configuration Parameters: Oracle, SQL Server, DB2 UDB.

TEXT BOOK

Dennis Shasha and Philippe Bonnet “Database Tuning, Principles, Experiments and Troubleshooting Techniques”, Morgan Kaufmann, Elsevier.

REFERENCES

MC5042 –OPEN SOURCE SOFTWARE

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 3
External Examination : 3 Hrs

UNIT-I

Open Source Software: Definitions & History- Definitions of terms, A Brief History of Software
Where Open Source Is Successful – Analytical Framework, Open Source in widespread successful use, Examples of Open Source Systems

UNIT-II

Five Open Source Opportunities – Introduction, Directory Services, Email, Groupware and Collaboration, Complex Web Publishing, Manage User Desktops, Other Possibilities
Operating Systems – Contents of the Operating systems, Linux Distribution Vendors, Enterprise Distribution Vendors, Community-Supported Distribution Vendors, International Alternatives

UNIT-III

Open Source Server Applications – Infrastructure Services, Web Services, Database Servers, Mail Servers, System Management
Open Source Desktop Applications – Introduction, Graphical Desktops, Web Browsers, The Office Suite, Mail and Calendar Clients, Personal Software

UNIT-IV

How Open Source Software is Developed – Methodology, Languages Used to Develop Open source Products, Cross-Platform Code

UNIT-V

The Cost of Open Source Systems- Total Cost of Ownership, Types of Costs, Scenarios Licensing – Types of Licenses, Licenses in Use, Mixing Open and Closed Code, Dual Licensing, Other Intellectual Property Issues

I. Rajendra Kumar
HEAD
Master of Computer Applications
Lakireddy Bali Reddy College of Engg.

TEXTBOOK

Open Source Software Implementation and Management, Paul Kavanagh, Elsevier Digital Press.

REFERENCES

MC5043 - SOFTWARE QUALITY MANAGEMENT

Lecture : 4 Periods/week  
Internal Marks : 40
External Marks : 60
Credits : 3  
External Examination : 3 Hrs

UNIT - I

Definition of quality, software quality, different views of quality, hierarchical model definition, hierarchical models of Boehm's and McCall, quality criteria interrelation, practical evaluation of quality criteria.

UNIT - II

Measuring quality, quality metrics, problems with metrics, overall measure of quality, work of GILB, the COQUAMO project, recent work on metrics, quality profiles.

UNIT - III

Growth of software engineering methods, methodologies based upon the waterfall life cycle, case tools, contribution of methods and tools to quality, alternate approaches to software development, standards based on software life cycle

UNIT - IV

Elements of QMS, the key to quality management, quality in software, the problem of user requirements, A QMS for software, quality assurance, purpose of standards, THE ISO 9000 series, ISO 9003 standards, impact of ISO9000.

UNIT - V

Capability Maturity Model individual levels of the CMM, role of the CMM, SPICE, four key issues in quality, Are case tools addressing the right issues?, what is the likely impact of standards?, beyond software quality the need for a strategic view.

MC5051 - DATABASE ADMINISTRATION

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 3
External Examination : 3 Hrs

UNIT-I

Introduction: Database Architecture, DBMS Architecture and Data independance, DBA roles and responsibilities, Logical Database layouts, Physical Database layouts, Hardware Configurations and considerations, Overview of physical and logical storage structures.

UNIT-II

Schema Management, User Management and Database Security, Database creation, Connectivity and User Management, Creating and modifying user accounts, Creating and using Roles, Granting and revoking privileges, Managing user groups with profiles, Managing user and Security, Profiles, Managing privileges.

UNIT-III

Transaction Management, Managing multiple Databases, Managing Rollback statements, Database security and auditing, Introduction to Network administration, Network responsibilities for DBA, Network configuration, Managing large Databases, managing Distributed Databases, Configuring, Client-Server and Network computing, Oracle background processors, Overview of Oracle Net Futures.

UNIT-IV

Backup and recovery : Overview, Database backup restoration and recovery. Types of failures in oracle environment. Defining backup and recovery strategies : Optimal backup and recovery procedures, Testing the backup and recovery plan.

UNIT-V

Introduction to performance tuning: Improving Database performance, Brief overview of Tuning methodology, An approach to oracle performance, Tuning, Optimizing, Oracle query processing, Query optimization and Oracle cost based Optimizer, The role of DBA to improve SQL processing.

#### UNIT - I

**Booting and shutting Down:** Bootstrapping, Booting Pcs, Booting in Single User mode, Startup Scripts Rebooting and Shutting down.

#### UNIT - II

**Controlling Processes:** Components of a process, Life cycle of a process, Signals, Process states.  
**The File System:** Path names, Mounting and unmounting files, Organization of the file tree, File types, File attributes.

#### UNIT - III

**Adding New Users:** The /etc/passwd file, Adding users, Removing users, Disabling logins, Configuration of hardwired terminals, Special characters and Terminal driver, How to un wedge a terminal.

#### UNIT - IV

**Adding a Disk:** Disk Interfaces, An overview of the disk installation procedure, Periodic Processes.  
**Backups:** Motherhood and apple pie, Backup devices and media, Restoring from dumps, Using other archiving programs.

#### UNIT - V

**Syslog and Log Files:** Logging Polices, Finding Log Files, Files not to manage, Syslog.  
**Drivers and the Kernel:** Kernel Types, Configuring a Solaris Kernel, Linux Kernel, Adding Device Drivers, Device Files, Naming Conventions for devices.

MC5053 –SOFTWARE PROJECT MANAGEMENT

Lecture : 4 Periods/week
Internal Marks : 40
External Marks : 60
Credits : 3
External Examination : 3 Hrs

UNIT-I

Evolution of Software Economics: Software economics, Pragmatic software cost estimation.
The Old way and the new: The principles of conventional software Engineering, Principles of modern software management, Transitioning to an iterative process.

UNIT-II

Life cycle phases: Engineering and Production stages, Inception, Elaboration, Construction, Transition phases.
Artifacts of the process: The Artifact sets, Management artifacts, Engineering artifacts, Programmatic artifacts.

UNIT-III

Model based software architectures: A Management perspective and technical perspective.
Work Flows of the process: Software process workflows, Iteration workflows
Checkpoints of the process: Major mile stones, Minor Milestones, Periodic status assessments.

UNIT-IV

Iterative Process Planning: Work breakdown structures, Planning guidelines, Cost and Schedule estimating, Iteration planning process, Pragmatic planning

UNIT-V

Project Control and Process instrumentation: The seven core Metrics, Management indicators, Quality indicators, Life cycle exceptions, Pragmatic Software Metrics, Metrics automation
Tailoring the Process: Process discriminants.
Future Software Project Management: Modern Project Profile, Next generation Software economics, Modern process transitions.

MC5054 – PRINCIPLES OF PROGRAMMING LANGUAGES

Lecture : 4 Periods/week  
Internal Marks : 40  
External Marks : 60  
Credits : 3  
External Examination : 3 Hrs

UNIT - I

UNIT - II

Syntax and Semantics: General Problem of describing Syntax and Semantics, Formal methods of describing syntax - BNF, EBNF for common programming languages features, Parse trees, Ambiguous grammars, Attribute grammars, Denotational semantics and Axiomatic semantics for common programming language features. Names, Variable, concept of binding, type checking, Strong typing, Type compatibility, Named constants, Variable initialization. Data types: Introduction, Primitive, Character, User defined, Array, Associative, Record, Union, Pointer and Reference types, Design and Implementation issues related to these types.

UNIT-III

Expressions and Statements: Arithmetic, Relational and Boolean expressions, Short circuit evaluation, Mixed mode assignment, Assignment Statements. Control Structures — Statement Level, Compound Statements, Selection, Iteration, Unconditional Statements, Guarded commands. Subprograms and Blocks: Fundamentals of sub-programs, Scope and lifetime of variable, Static and Dynamic scope, Design issues of subprograms and operations, Local referencing environments, Parameter passing methods, Overloaded sub-programs, Generic sub-programs, Parameters that are sub-program names, Design issues for functions, User defined overloaded operators, Co-routines.

UNIT - IV

Abstract Data types: Abstractions and encapsulation, introduction to data abstraction, Design issues. Language examples, C++ parameterized ADT. Object oriented programming in C++,Java, Concurrency: Subprogram level concurrency, Semaphores, Monitors, Message passing, Java threads, C# threads.

UNIT - V:

Exception handling : Exceptions, Exception Propagation, Exception handling in Ada, C++ and Java.  
Logic Programming Language: Introduction and overview of logic programming, basic elements of prolog, application of logic programming.
