COURSE HANDOUT

PROGRAM : B.Tech, V-Sem, ME-A/S
ACADEMIC YEAR : 2022-23
COURSE NAME & CODE : IC ENGINES AND GAS TURBINES (20ME10)
L-T-P STRUCTURE : 3-1-0
COURSE CREDITS : 3
COURSE INSTRUCTOR : Dr P.VIJAY KUMAR
COURSE COORDINATOR : Dr P.VIJAY KUMAR
PRE-REQUISITE: THERMODYNAMICS

COURSE OBJECTIVE:

To provide students an insight of fundamentals and salient features of internal combustion engines and sub-systems, performance analysis, modern automotive engines, electric vehicles, gas turbines and aircraft propulsion systems.

COURSE OUTCOMES (CO):

CO1: Describe the construction and functioning of internal combustion engines fuel supply systems for SI and CI engines, modern automotive engines and electric vehicles (**Understanding Level-2**)

CO2: Comprehend the combustion characteristics of SI engines and CI engines. (**Understanding Level-2**)

CO3: Compute the IC engine performance parameters (**Apply Level-3**)

CO4: Understand the construction and functioning of gas turbines (**Understanding Level-2**)

CO5: Apply gas turbine cycles for aircraft propulsion systems (**Apply Level-3**)

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1: To build a professional career and pursue higher studies with sound knowledge in Mathematics, Science and Mechanical Engineering.

PEO2: To inculcate strong ethical values and leadership qualities for graduates to become successful in multidisciplinary activities.

PEO3: To develop inquisitiveness towards good communication and lifelong learning.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multi-disciplinary-environments.
- 12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSOs

- 1.** To apply the principles of thermal sciences to design and develop various thermal systems.
- 2.** To apply the principles of manufacturing technology, scientific management towards improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products.
- 3.** To apply the basic principles of mechanical engineering design or evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment.

COURSE EDUCATIONAL OBJECTIVES (CEOs): The main objective of this course is to provide an overview of machine tools and various principles of measurements.

COURSE OUTCOMES (COs): At the end of the course, the student will be able to

| | |
|------------|--|
| CO1 | Understand the concepts of metal cutting theory (Understanding - L2) |
| CO2 | Differentiate various machining processes (Understanding - L2) |
| CO3 | Comprehend the principles of finishing processes. (Understanding - L2) |
| CO4 | Identify the instruments to measure linear, angular, and surface texture parameters (Understanding - L2) |
| CO5 | Apply limits and fits on machine components and perform alignment tests on machine tools. (Applying - L3) |

PART-D

PROGRAMME OUTCOMES (POs):

| | |
|-------|--|
| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering Problems. |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, Natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the Engineering and management principles and apply these to one's own work, as a |

| | |
|--------------|--|
| | member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

PROGRAMME SPECIFIC OUTCOMES (PSOs):

| | |
|--------------|---|
| PSO 1 | To apply the principles of thermal sciences to design and develop various thermal systems. |
| PSO 2 | To apply the principles of manufacturing technology, scientific management towards Improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products. |
| PSO 3 | To apply the basic principles of mechanical engineering design for evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment. |

COURSE HANDOUT

PART-A

Name of Course Instructor: Dr.P.V.Chandra Sekhar Rao

Course Name & Code : Design of Machine Elements-I & 20ME12

L-T-P Structure : 2-1-0

Program/Sem/Sec : B.Tech/V/A

2022-23

Credits: 3

A.Y.:

PREREQUISITE: Mechanics of Solids

COURSE EDUCATIONAL OBJECTIVES (CEOs): The main objective of this course is to familiarize the steps involved in the design process of various machine elements.

COURSE OUTCOMES (COs): At the end of the course, the student will be able to

| | |
|------------|---|
| CO1 | Comprehend the simple stresses in machine parts subjected to static loads. (Understanding-L2) |
| CO2 | Analyze the failure criterion of mechanical parts subjected to fatigue loads. (Analyzing-L4) |
| CO3 | Evaluate the strengths of welded & threaded joints subjected to various types of loads. (Applying-L3) |
| CO4 | Design the shafts for various applications of engineering. (Applying-L3) |
| CO5 | Design the various mechanical elements such as keys, cotter, knuckle joints & shaft couplings. (Applying-L3) |

PART-D

PROGRAMME OUTCOMES (POs):

| | |
|--------------|--|
| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering Problems. |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, Natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the Engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |

| | |
|--------------|--|
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |
|--------------|--|

PROGRAMME SPECIFIC OUTCOMES (PSOs):

| | |
|--------------|---|
| PSO 1 | To apply the principles of thermal sciences to design and develop various thermal systems. |
| PSO 2 | To apply the principles of manufacturing technology, scientific management towards Improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products. |
| PSO 3 | To apply the basic principles of mechanical engineering design for evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment. |

| PER-REQUISITE | : Engineering Mechanics & Kinematics of Machines |

COURSE EDUCATIONAL OBJECTIVES:

The main objective of this course is to cultivate the interest and ability to develop robotic systems for social and industrial development.

COURSE OUTCOMES:

After completion of the course student will be able to:

CO1: Understand the basics of robots, end effectors and its applications.

CO2: Familiarize the working of actuators and sensors for robotic application.

CO3: Formulate D-H matrices for different kinematics problems.

CO4: Model the dynamic behavior of robot.

CO5: Analyze the trajectory of robotic motion.

PART – D**PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):**

PEO1: To build a professional career and pursue higher studies with sound knowledge in Mathematics, Science and Mechanical Engineering.

PEO2: To inculcate strong ethical values and leadership qualities for graduates to become successful in multidisciplinary activities.

PEO3: To develop inquisitiveness towards good communication and lifelong learning.

PROGRAMME OUTCOMES (POs):

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

- 2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

1. To apply the principles of thermal sciences to design and develop various thermal systems.
2. To apply the principles of manufacturing technology, scientific management towards improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products.
3. To apply the basic principles of mechanical engineering design for evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment.

DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

COURSE HANDOUT

PART-A

Name of Course Instructor: Mr. P.GANDHI PRAKASH

Course Name & Code : INTRODUCTION TO ARTIFICIAL INTELLIGENCE – 20AD81

L-T-P Structure : 3-0-0

Credits: 3

Program/Branch/Sem : B.Tech/MECH/V-A&B

A.Y.: 2022-23

PRE-REQUISITE: Basic Engineering Mathematics Knowledge

Course Educational Objective:

The objective of the course is to present an overview of artificial intelligence (AI) principles and approaches. Develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents: Search, Knowledge representation, inference, logic, reasoning, and learning. Students will implement a small AI system in a team environment. The knowledge of artificial intelligence plays a considerable role in some applications students develop for courses in the program.

Course Outcomes: At the end of this course, the student will be able to

| | |
|-----|---|
| CO1 | Enumerate the history and foundations of Artificial Intelligence. (Understand-L2) |
| CO2 | Apply the basic principles of AI in problem solving. (Apply-L3). |
| CO3 | Explain the different searching algorithms to find and optimize the solution for the given Problem. (Understand-L2) |
| CO4 | Illustrate the different gaming algorithms and identify the importance of knowledge Representation in Artificial Intelligence. (Apply-L3) |
| CO5 | Describe the use of predicate logic and rule-based system to represent the knowledge in AI domain. (Understand-L2) |

PART-D

PROGRAMME OUTCOMES (POs):

| | |
|--------------|--|
| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

PROGRAMME SPECIFIC OUTCOMES (PSOs):

| | |
|--------------|--|
| PSO 1 | To apply the fundamental engineering knowledge, computational principles, and methods for extracting knowledge from data to identify, formulate and solve real timeproblems. |
| PSO 2 | To develop multidisciplinary projects with advanced technologies and tools to address social and environmental issues. |
| PSO 3 | To provide a concrete foundation and enrich their abilities for Employment and Higher studies in Artificial Intelligence and Data science with ethical values |

PROGRAMME OUTCOMES (POs):

| | |
|-------------|--|
| P01 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
| P02 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| P03 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| P04 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| P05 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations |
| P06 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues, and the consequent responsibilities relevant to the professional engineering practice |
| P07 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| P08 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| P09 | Individual and teamwork: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| P010 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| P011 | Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |
| P012 | Life-long learning: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

| COURSE CREDITS | : 1.5 |
| COURSE INSTRUCTOR | : Mr. Mallikarjuna Rao Dandu & Mr. S. Rami Reddy |
| COURSE COORDINATOR | : Dr. V. Dhana Raju |
| MODULE COORDINATOR | : Dr. P. Vijaya Kumar |
| PRE-REQUISITE: | IC Engines and Gas Turbines and Applied Thermodynamics |

COURSE OBJECTIVE:

The main objective of this course is to demonstrate the concepts of engineering mechanics and fuels through experiments.

COURSE OUTCOMES:

At the end of the course, the student will be able to:

CO1: Examine the valve timing diagram and port timing diagram of internal combustion engines

CO2: Analyze the performance characteristics of an internal combustion engines

CO3: Estimate the energy distribution and frictional power of diesel engine using heat balance and morse test

CO4: Describe the performance parameters of refrigeration system and air compressor

LIST OF EXPERIMENTS: Thermal Engineering Lab, 20ME60

CYCLE-I

1. Valve timing diagram of a single cylinder 4-stroke compression ignition engine
2. Port timing diagram of single cylinder 2-stroke spark ignition engine.
3. Performance test on single cylinder 4-stroke diesel engine
4. Performance test on twin cylinder 4-stroke diesel engine
5. Performance test on single cylinder 2-stroke petrol engine

CYCLE-II

6. Heat balance test on twin cylinder four stroke compression ignition engine
7. Performance test on reciprocating air compressor
8. Morse test on twin cylinder four stroke compression ignition engine
9. Performance test on Vapour compression refrigeration system
10. Performance test on Air Conditioning system

LIST OF EXPERIMENTS

At least 06 Experiments from each laboratory and 12 overall should be conducted

PART-A (Machine Tools Lab) List of Experiments: (At least five experiments may be conducted)

- Study of various machine tools.
- To perform the step turning and taper turning operation on lathe machine.
- To perform knurling and threading operations on lathe machine.
- To prepare a single point cutting tool.
- To produce a spur gear using milling machine.
- To cut a rectangular groove or key way shaping, planar and slotter machines.
- To perform drilling and tapping operations using drilling machine.
- To prepare a smooth flat surface using surface grinding machine.

PART-B (Metrology Lab) List of Experiments (At least five experiments may be conducted)

- Measurement of lengths, height, diameter using vernier callipers and micrometers.
- Measurement of bores by dial bore indicators.
- Taper measurement using balls and rollers.
- Check the gear parameters of a gear using Gear teeth vernier callipers.
- Machine tool alignment test on the lathe.
- Measurement of screw thread parameters using tool makers' microscope.
- Angle and taper measurement using bevel protractor, slip guage and sine bars, etc.
- Thread measurement by three wire method.
- Surface roughness measurement by Talysurf.

Notification of Cycles (Section – A)

Cycle – I: MACHINE TOOLS LAB

At least SIX experiments may be conducted.

LIST OF EXPERIMENTS:

- To perform the step turning operation and taper turning operation.
- To perform knurling operation and threading operations
- To form and grind the given work piece (square rod) into single point cutting tool
- To cut spur gear on a given M.S.Round blank using milling machine.
- To cut a rectangular groove (or key way) with given dimensions on work piece using Shaping machine, Planar Machine and Slotter.
- To perform drilling and tapping operations on a given M.S. plate using universal drilling machine.
- To prepare a smooth flat surface on M.S.flat using surface Grinding machine.
- Study various machine tools

Cycle – II: DYNAMICS LAB

At least SIX experiments may be conducted.

LIST OF EXPERIMENTS

Any of the 6 Experiments are required to be conducted

- a) To determine gyroscopic couple on Motorized Gyroscope
- b) Determination of transmission efficiency of gear reducers
- a) To find the stability and sensitivity of Watt governor
- b) To find the stability and sensitivity of Porter governor
- To find the transverse vibrations of free-free beam
- a) Balancing of rotating masses
- b) Balancing of reciprocating masses
- Determination of damping coefficient of single degree of freedom system using spring mass system
- Determination of critical speed of shaft with concentration loads
- a) Determine the moment of inertia of connecting rod by compound pendulum method

COURSE HANDOUT

PROGRAM : B.Tech, V-Sem, ME-B/S
ACADEMIC YEAR : 2022-23
COURSE NAME & CODE : IC ENGINES AND GAS TURBINES (20ME10)
L-T-P STRUCTURE : 3-1-0
COURSE CREDITS : 3
COURSE INSTRUCTOR : Dr P.RAVINDRA KUMAR
COURSE COORDINATOR : Dr P.VIJAY KUMAR
PRE-REQUISITE: THERMODYNAMICS

COURSE OBJECTIVE:

To provide students an insight of fundamentals and salient features of internal combustion engines and sub-systems, performance analysis, modern automotive engines, electric vehicles, gas turbines and aircraft propulsion systems.

COURSE OUTCOMES (CO):

CO1: Describe the construction and functioning of internal combustion engines fuel supply systems for SI and CI engines, modern automotive engines and electric vehicles **(Understanding Level-2)**

CO2: Comprehend the combustion characteristics of SI engines and CI engines. **(Understanding Level-2)**

CO3: Compute the IC engine performance parameters **(Apply Level-3)**

CO4: Understand the construction and functioning of gas turbines **(Understanding Level-2)**

CO5: Apply gas turbine cycles for aircraft propulsion systems **(Apply Level-3)**

COURSE ARTICULATION MATRIX (Correlation between COs & POs, PSOs):

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

PEO1: To build a professional career and pursue higher studies with sound knowledge in Mathematics, Science and Mechanical Engineering.

PEO2: To inculcate strong ethical values and leadership qualities for graduates to become successful in multidisciplinary activities.

PEO3: To develop inquisitiveness towards good communication and lifelong learning.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

1. Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

2. Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

8. Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. Individual and team work: Function effectively as an individual, and as a member or

leader in diverse teams, and in multidisciplinary settings.

10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multi-disciplinary-environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PSOs

1. To apply the principles of thermal sciences to design and develop various thermal systems.

2. To apply the principles of manufacturing technology, scientific management towards improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products.

3. To apply the basic principles of mechanical engineering design or evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment.

PREREQUISITE: Production Technology

COURSE EDUCATIONAL OBJECTIVES (CEOs): The main objective of this course is to provide an overview of machine tools and various principles of measurements.

COURSE OUTCOMES (COs): At the end of the course, the student will be able to

| | |
|------------|--|
| CO1 | Understand the concepts of metal cutting theory (Understanding - L2) |
| CO2 | Differentiate various machining processes (Understanding - L2) |
| CO3 | Comprehend the principles of finishing processes. (Understanding - L2) |
| CO4 | Identify the instruments to measure linear, angular, and surface texture parameters (Understanding - L2) |
| CO5 | Apply limits and fits on machine components and perform alignment tests on machine tools. (Applying - L3) |

PROGRAMME OUTCOMES (POs):

| | |
|-------|--|
| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering Problems. |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, Natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations. |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the Engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

COURSE EDUCATIONAL OBJECTIVES:

The main objective of this course is to cultivate the interest and ability to develop robotic systems for social and industrial development.

COURSE OUTCOMES:

After completion of the course student will be able to:

- CO1:** Understand the basics of robots, end effectors and its applications.
- CO2:** Familiarize the working of actuators and sensors for robotic application.
- CO3:** Formulate D-H matrices for different kinematics problems.
- CO4:** Model the dynamic behavior of robot.

PART – D**PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):**

PEO1: To build a professional career and pursue higher studies with sound knowledge in Mathematics, Science and Mechanical Engineering.

PEO2: To inculcate strong ethical values and leadership qualities for graduates to become successful in multidisciplinary activities.

PEO3: To develop inquisitiveness towards good communication and lifelong learning.

PROGRAMME OUTCOMES (POs):

Engineering Graduates will be able to:

- 1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- 3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- 4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for, sustainable development.
- 8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- 10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- 11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

1. To apply the principles of thermal sciences to design and develop various thermal systems.
2. To apply the principles of manufacturing technology, scientific management towards improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products.
3. To apply the basic principles of mechanical engineering design for evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment.

DEPARTMENT OF ARTIFICIAL INTELLIGENCE AND DATA SCIENCE

COURSE HANDOUT

PART-A

Name of Course Instructor: Mr. P.GANDHI PRAKASH

Course Name & Code : INTRODUCTION TO ARTIFICIAL INTELLIGENCE& 20AD81

L-T-P Structure : 3-0-0 **Credits:** 3

Program/Branch/Sem : B.Tech/MECH/V-A&B **A.Y.:** 2022-23

PRE-REQUISITE: Basic Engineering Mathematics Knowledge

Course Educational Objective:

The objective of the course is to present an overview of artificial intelligence (AI) principles and approaches. Develop a basic understanding of the building blocks of AI as presented in terms of intelligent agents: Search, Knowledge representation, inference, logic, reasoning, and learning. Students will implement a small AI system in a team environment. The knowledge of artificial intelligence plays a considerable role in some applications students develop for courses in the program.

Course Outcomes: At the end of this course, the student will be able to

| | |
|------------|--|
| CO1 | Enumerate the history and foundations of Artificial Intelligence. (Understand-L2) |
| CO2 | Apply the basic principles of AI in problem solving. (Apply-L3). |
| CO3 | Explain the different searching algorithms to find and optimize the solution for the given Problem. (Understand-L2) |
| CO4 | Illustrate the different gaming algorithms and identify the importance of knowledge Representation in Artificial Intelligence. (Apply-L3) |
| CO5 | Describe the use of predicate logic and rule-based system to represent the knowledge in AI domain. (Understand-L2) |

PROGRAMME OUTCOMES (POs):

| | |
|--------------|--|
| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and |

| | |
|--------------|--|
| | write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

PROGRAMME SPECIFIC OUTCOMES (PSOs):

| | |
|--------------|---|
| PSO 1 | To apply the fundamental engineering knowledge, computational principles, and methods for extracting knowledge from data to identify, formulate and solve real time problems. |
| PSO 2 | To develop multidisciplinary projects with advanced technologies and tools to address social and environmental issues. |
| PSO 3 | To provide a concrete foundation and enrich their abilities for Employment and Higher studies in Artificial Intelligence and Data science with ethical values |

PRE-REQUISITE : Programming for Problem Solving Using C

COURSE EDUCATIONAL OBJECTIVE (CEO): Concentrates on the methodological and technical aspects of software design and Programming based on Object-Oriented Programming (OOP). Acquire the basic knowledge and skills necessary to implement Object-Oriented Programming Techniques in software development through JAVA. Know about the importance of Collections and GUI based applications through JAVA.

COURSE OUTCOMES (COs): At the end of the course, the student will be able to:

| | |
|------------|---|
| CO1 | Understand Object Oriented Programming Concepts through constructs of JAVA. (Understand- L2) |
| CO2 | Apply the concepts of Inheritance and Polymorphism on real-world applications. (Apply - L3) |
| CO3 | Implement reusability using interface and packages. (Understand- L2) |
| CO4 | Construct robust applications using exception handling. (Apply - L3) |
| CO5 | Understand multi-threading concepts. (Understand - L2) |

COURSE OUTCOMES:

At the end of the course, the student will be able to:

- CO1: Examine the valve timing diagram and port timing diagram of internal combustion engines
- CO2: Analyze the performance characteristics of an internal combustion engines
- CO3: Estimate the energy distribution and frictional power of diesel engine using heat balance and morse test
- CO4: Describe the performance parameters of refrigeration system and air compressor

LIST OF EXPERIMENTS: Thermal Engineering Lab, 20ME60

CYCLE-I

1. Valve timing diagram of a single cylinder 4-stroke compression ignition engine
2. Port timing diagram of single cylinder 2-stroke spark ignition engine.
3. Performance test on single cylinder 4-stroke diesel engine
4. Performance test on twin cylinder 4-stroke diesel engine
5. Performance test on single cylinder 2-stroke petrol engine

CYCLE-II

6. Heat balance test on twin cylinder four stroke compression ignition engine
7. Performance test on reciprocating air compressor
8. Morse test on twin cylinder four stroke compression ignition engine
9. Performance test on Vapour compression refrigeration system
10. Performance test on Air Conditioning system

PART-D**PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):**

| | |
|--------------|---|
| PEO 1 | To build a professional career and pursue higher studies with sound knowledge in Mathematics, Science and Mechanical Engineering. |
| PEO 2 | To inculcate strong ethical values and leadership qualities for graduates to become successful in multidisciplinary activities.. |
| PEO 3 | To develop inquisitiveness towards good communication and lifelong learning. |

PROGRAMME OUTCOMES (POs):

| | |
|--------------|--|
| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations. |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a |

| | |
|--------------|--|
| | member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change. |

PROGRAMME SPECIFIC OUTCOMES (PSOs):

| | |
|--------------|---|
| PSO 1 | To apply the principles of thermal sciences to design and develop various thermal systems |
| PSO 2 | To apply the principles of manufacturing technology, scientific management towards improvement of quality and optimization of engineering systems in the design, analysis and manufacturability of products. |
| PSO 3 | To apply the basic principles of mechanical engineering design for evaluation of performance of various systems relating to transmission of motion and power, conservation of energy and other process equipment. |

COURSE EDUCATIONAL OBJECTIVES (CEOs) and COURSE OUTCOMES (COs):

PRE-REQUISITES: Engineering Drawing, Production Technology, Machine Tools and Metrology

COURSE EDUCATIONAL OBJECTIVES:

The main objective of this laboratory course is to provide hands on experience using machine tools and metrology instruments.

COURSE OUTCOMES: at the end of the course, the student will be able to

- CO1.** Develop sequence of machining operations to produce the component. (**Applying-L3**)
- CO2.** Capable of machining components according to given drawing using various machine tools. (**Applying-L3**)
- CO3.** Perform linear, angular and gear measurements of machined components. (**Applying-L3**)
- CO4.** Analyze the measurement of the surface roughness and perform alignment tests. (**Applying-L3**)

LIST OF EXPERIMENTS

At least 06 Experiments from each laboratory and 12 overall should be conducted

PART-A (Machine Tools Lab) List of Experiments: (At least five experiments may be conducted)

- Study of various machine tools.
- To perform the step turning and taper turning operation on lathe machine.
- To perform knurling and threading operations on lathe machine.
- To prepare a single point cutting tool.
- To produce a spur gear using milling machine.
- To cut a rectangular groove or key way shaping, planar and slotter machines.
- To perform drilling and tapping operations using drilling machine.
- To prepare a smooth flat surface using surface grinding machine.

PART-B (Metrology Lab) List of Experiments (At least five experiments may be conducted)

- Measurement of lengths, height, diameter using vernier callipers and micrometers.
- Measurement of bores by dial bore indicators.
- Taper measurement using balls and rollers.
- Check the gear parameters of a gear using Gear teeth vernier callipers.
- Machine tool alignment test on the lathe.
- Measurement of screw thread parameters using tool makers's microscope.
- Angle and taper measurement using bevel protractor, slip guage and sine bars, etc.
- Thread measurement by three wire method.
- Surface roughness measurement by Talysurf.

Notification of Cycles (Section – B)

Cycle – I: MACHINE TOOLS LAB

At least SIX experiments may be conducted.

LIST OF EXPERIMENTS:

- To perform the step turning operation and taper turning operation.
- To perform knurling operation and threading operations
- To form and grind the given work piece (square rod) into single point cutting tool
- To cut spur gear on a given M.S.Round blank using milling machine.
- To cut a rectangular groove (or key way) with given dimensions on work piece using Shaping machine, Planar Machine and Slotter.
- To perform drilling and tapping operations on a given M.S. plate using universal drilling machine.
- To prepare a smooth flat surface on M.S.flat using surface Grinding machine.
- Study various machine tools

Cycle – II: DYNAMICS LAB

At least SIX experiments may be conducted.

LIST OF EXPERIMENTS

Any of the 6 Experiments are required to be conducted

- a) To determine gyroscopic couple on Motorized Gyroscope
- b) Determination of transmission efficiency of gear reducers
- a) To find the stability and sensitivity of Watt governor
- b) To find the stability and sensitivity of Porter governor
- To find the transverse vibrations of free-free beam
- a) Balancing of rotating masses
- b) Balancing of reciprocating masses
- Determination of damping coefficient of single degree of freedom system using spring mass system
- Determination of critical speed of shaft with concentration loads
- a) Determine the moment of inertia of connecting rod by compound pendulum method
